startup script (s) :/export/home/users/sysuser/epics/R3.12.2-LBL.4/ioc/bbc/bbc.startup

To edit this you must kill a boot then type c at the [VxWorks Boot] prompt

(follow the screen instructions)

Files

Currently the bbc.startup is in the "/export/home/users/sysuser/epics/R3.12.2-LBL.4/ioc/bbc "directory and will remain so."

The demand file is called demand.bbc and is in

--- "export/home/users/sysuser/epics/R3.12.2-LBL.4/TRGhvApp/src/bbc "

The medm screens are in

once there medm & brings up the medm menu for you to choose a file. Choose BBChy top.adl

Other relevant files

The source file BBChv.c is in

"export/home/users/sysuser/epics/R3.12.2-LBL.4/TRGhvApp/src

(use the Makefile.Vx to compile)

The data base files for the data base records are in

"export/home/users/sysuser/epics/R3.12.2-LBL.4/TRGhvApp/TRGhvDb"

BBChv_all.db BBChv_macro.db BBChv_macro15.db

(WE MAY PUT THESE IN A NEW SUBDIRECTORY /BBChvDb)

In an analogous fashion we will create FPEhv and FPWhv database files, medm screens src files and startup scripts

BBC -> FPE

bbc -> fpe

and

BBC ->FPW

Bbc ->fpw
